## About the App

The PDF Reader Pro Edition by iTech Development Systems is an iPhone application designed to create, view, and email PDF documents at the touch of a finger. Simple to use, the app takes mobile PDF documents to a whole new level!

Some of the features available for the PDF Reader Pro Edition are:

- ✓ Landscape mode (auto rotation)
- ✓ Search capabilities (Easily find any word on your PDF file)
- ✓ Jump to a specific page
- ✓ Bookmark a page
- ✓ Open password protected PDF files
- ✓ Email PDF files directly from the application (files up to 10MB)
- ✓ Wifi web sharing (Easily transfer your PDF files)
- ✓ Document Manager (Copy, cut, paste, and delete)
- ✓ Upload/download PDF files directly from the Web
- ✓ Remember the last position when opening a PDF file
- ✓ Scan Option available to create multi-page documents in PDF format (in-app purchase)

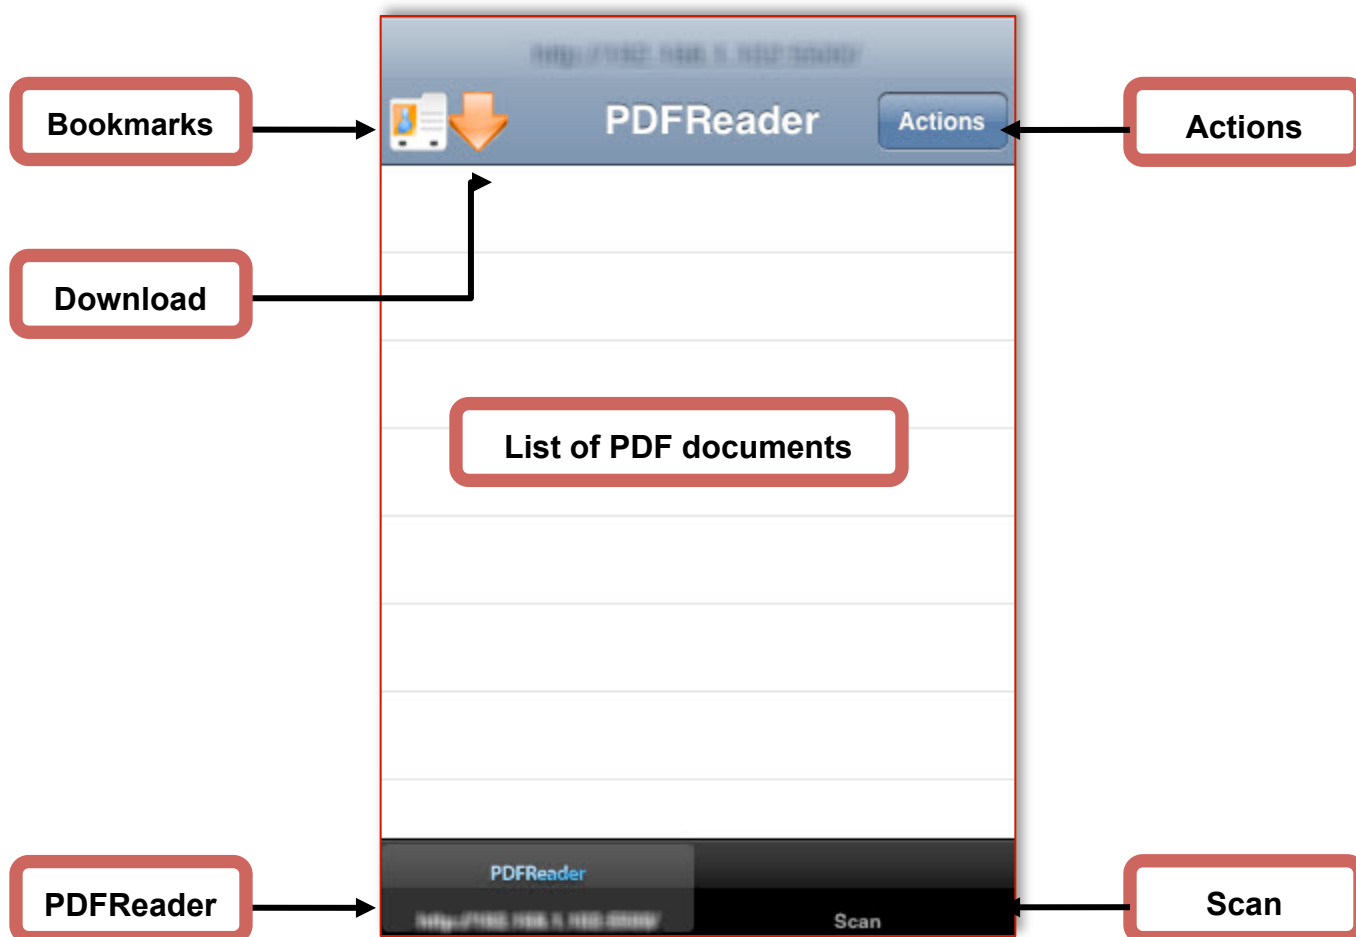

**More features coming soon!**

## The Interface

The PDF Reader Pro Edition application contains two tabs. Upon opening the app, the PDFReader tab is active. The next sections will review each tab and its features.

### PDF Reader tab

At the very top of the screen, you see a web address of the phone (if connected to a wireless network). This is used for transferring documents to a computer through wifi. This feature will be discussed later in this guide.

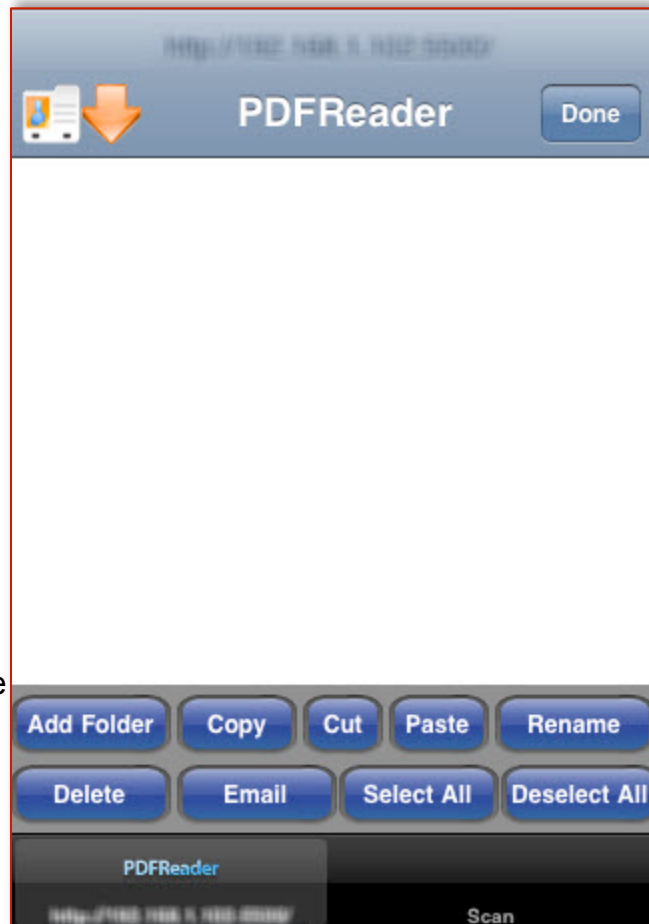

### Actions

Using the **Actions** button, you can perform various actions on the PDFs.

- **Add Folder** – Create folders to store the PDFs
- **Copy**– Copy the selected PDFs
- **Cut** – Cut the PDFs
- **Paste** – Paste the PDFs
- **Rename** – Rename the selected PDFs
- **Delete** – Delete the selected PDFs
- **Email** – Email the PDFs
- **Select All** – Used to select all of the files
- **Deselect All** – Used to deselect the files

Press **Done** once you are complete to close the Actions options.

### Bookmarks

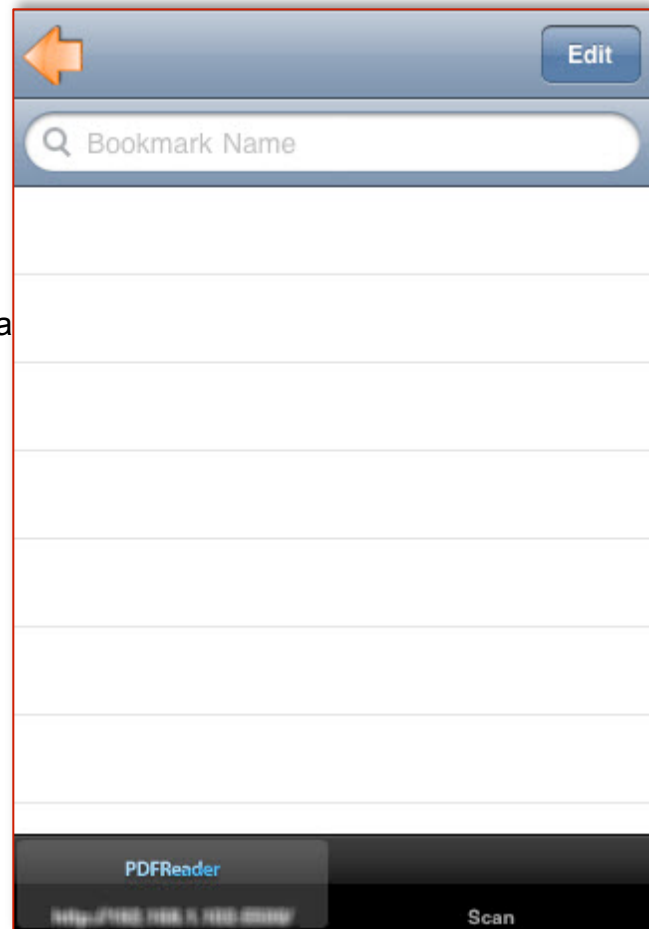

Bookmark  
button

Using the  
**Bookmarks**  
button, you can

search for a particular bookmark listed. The bookmark feature allows the user to create a custom bookmark when reading a document so that part of the document can be accessed directly from the bookmark menu.

Once done, press the **Back** button to return to the PDFReader tab.

### Download

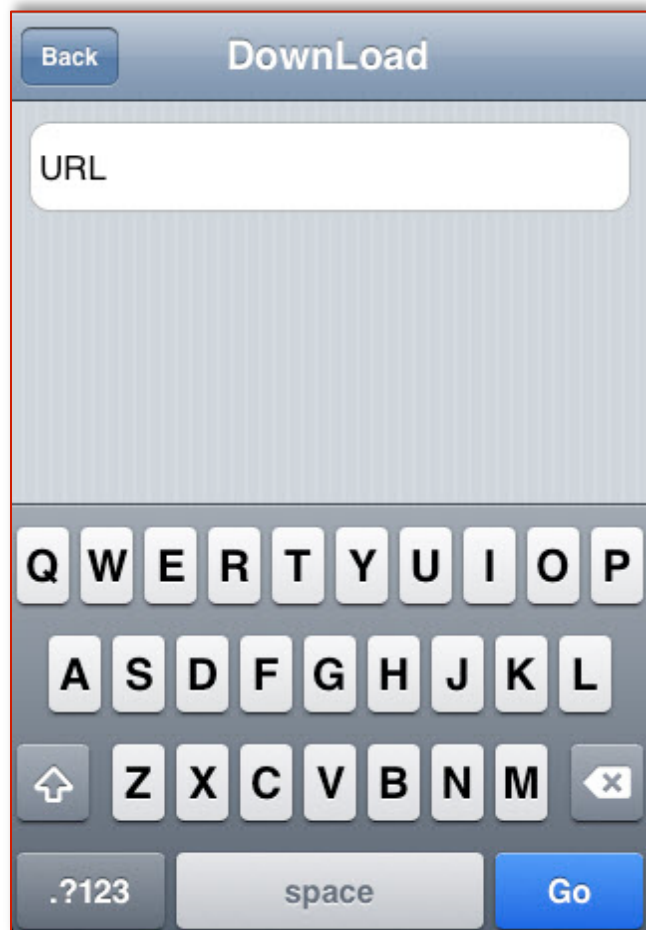

Download  
button

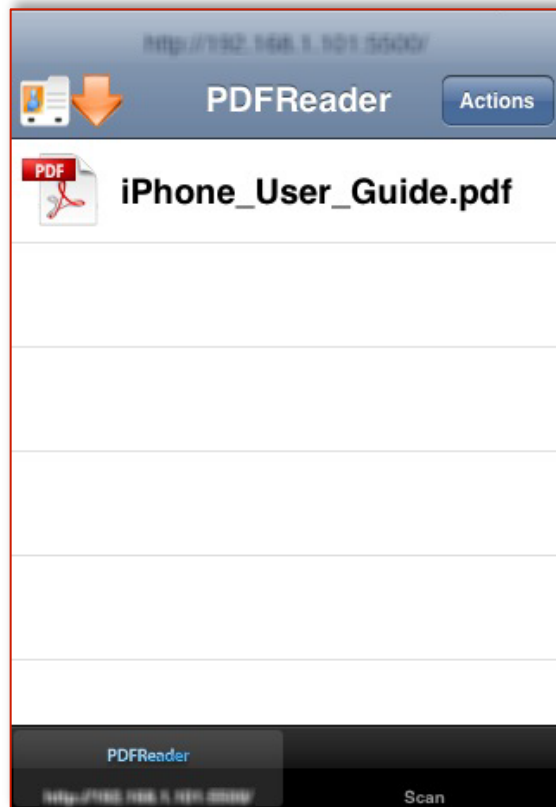

This button allows you to download a file directly from a public website. If you want to download a file directly from a webpage using the PDF Reader application, use the **Download** button and type the website address. For example, if you enter this URL in the URL field: [http://manuals.info.apple.com/en\\_US/iPhone\\_User\\_Guide.pdf](http://manuals.info.apple.com/en_US/iPhone_User_Guide.pdf) , you will be able to download the iPhone user guide directly from Apple's website.

You can also copy a link from the Safari web browser using the copy/paste feature to ease in navigation.

#### Steps:

1. Enter or paste the URL of the website.
2. Press **Go**.
3. The PDF will be listed on the main screen of PDFReader (see screenshot below).
4. You can now view the file or perform various actions with the file as discussed in the [Actions](#) section.

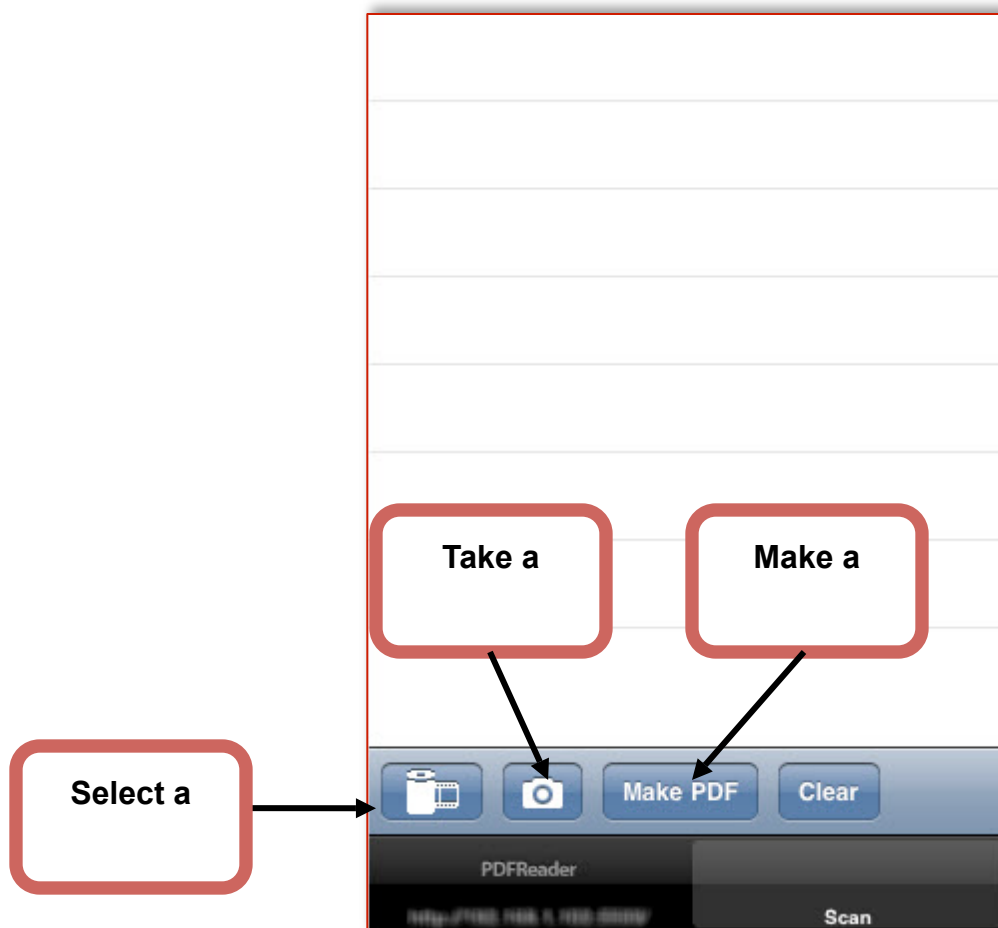

*Screenshot with PDF listed*

### **Scan tab**

The Scan tab links to the *Scanner Pro Edition* add-in which is available for purchase within the application. This add-in allows you to create PDFs using the iPhone/iPod Touch's built-in camera. On the Scan tab, there are four buttons used to create a PDF – **Camera Roll**, **Camera**, **Make a PDF** and the **Clear** button. Information on using these features is included below.

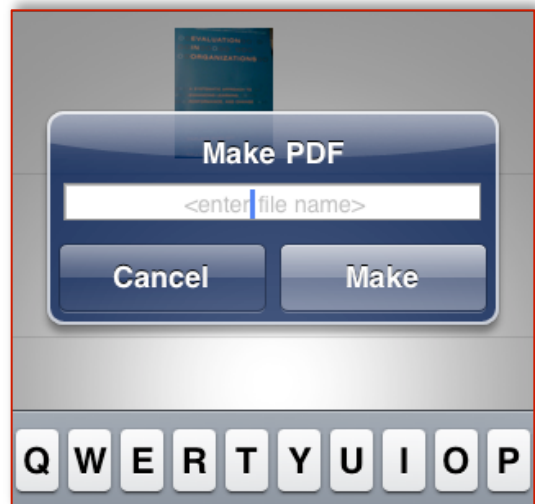

Let's look at how to create a PDF using the Scan feature.

## Create PDF using Scan

A PDF can be created from any existing photo or the app allows you to take a picture on the fly and convert that to a PDF. For example, if you are away from your computer and need to scan a document to email to someone, you can take a picture of the document and use PDF Reader Pro Edition to email the PDF directly to the recipient – no computer needed!

### Steps:

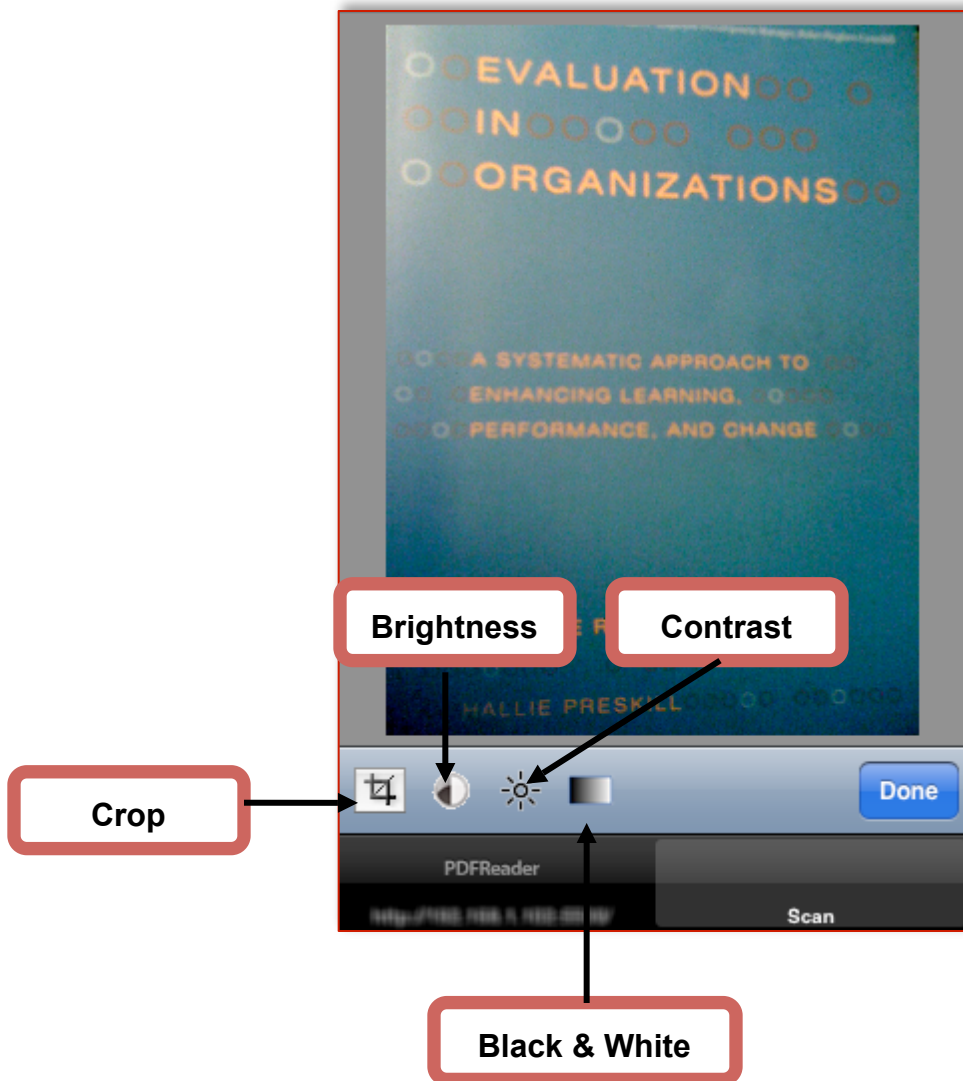

1. Select the **Camera Roll** button to launch the camera feature.
2. Take a picture of the object that you would like to PDF.
3. If the picture is correct, press the **Use** button or else press **Retake** to take another picture.
4. The picture will display in the list.
5. If the picture should be edited prior to being converted to PDF, select the picture to open a subset of editing tools. (See the Picture Editing section below)
6. When ready to convert to PDF, press the **Make PDF** button and enter a file name for the PDF. Keep filenames under 128 characters, if possible.
7. Click **Make** and the PDF will be saved on your device.

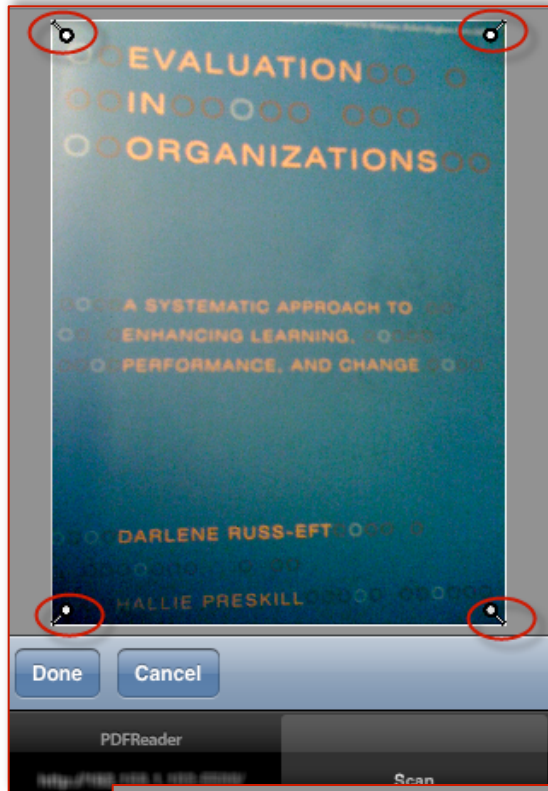

**Editing a Picture**

Before converting a picture into PDF, it can be edited using the built-in editing tools.

Select the picture from the list in the Scan tab which will display four editing tools:

*Crop*

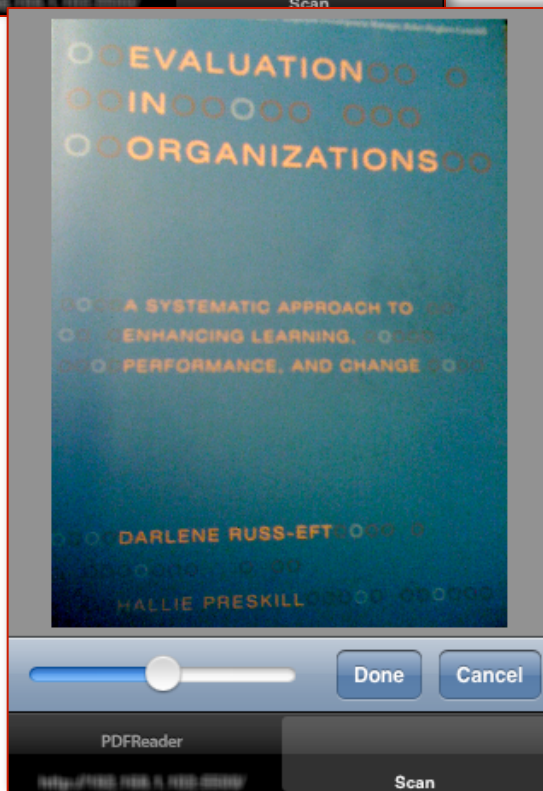

Select what part of picture you want to use to create a PDF file by using the crop handles located at the four corners of the picture.

Once complete, press **Done**.

Move  
**Done**

Move  
**Done**

*Brightness*  
the slider to adjust the brightness. Press when complete.

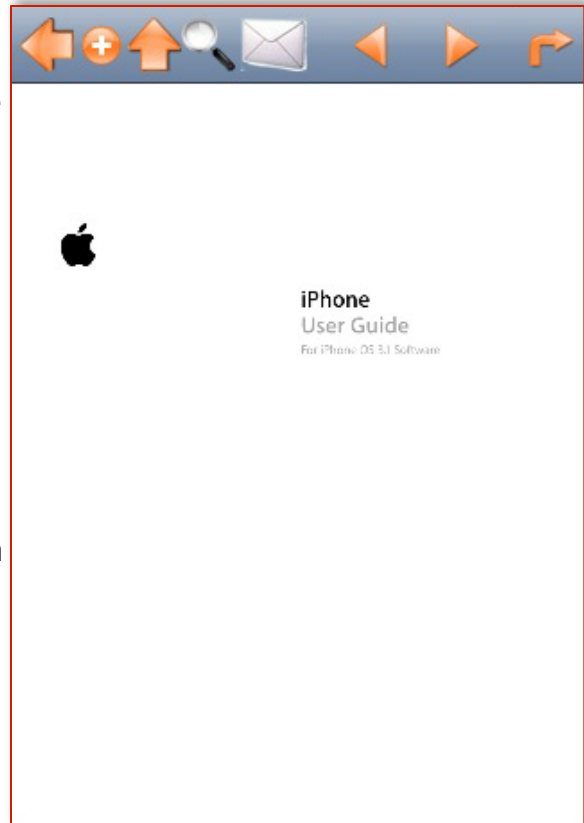

*Contrast*  
the slider to adjust the contrast. Press when complete.

*Black & White*

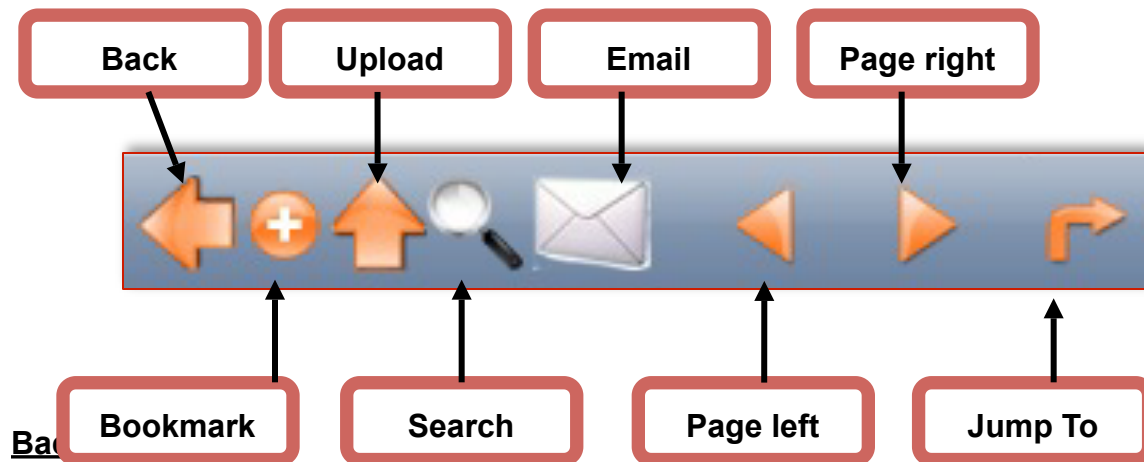

The black and white button is used to convert a photo from color to black and white.

**Opening a PDF file**

To open a PDF file, select the file from the PDFReader main screen. You will then see the PDF in a view like this:

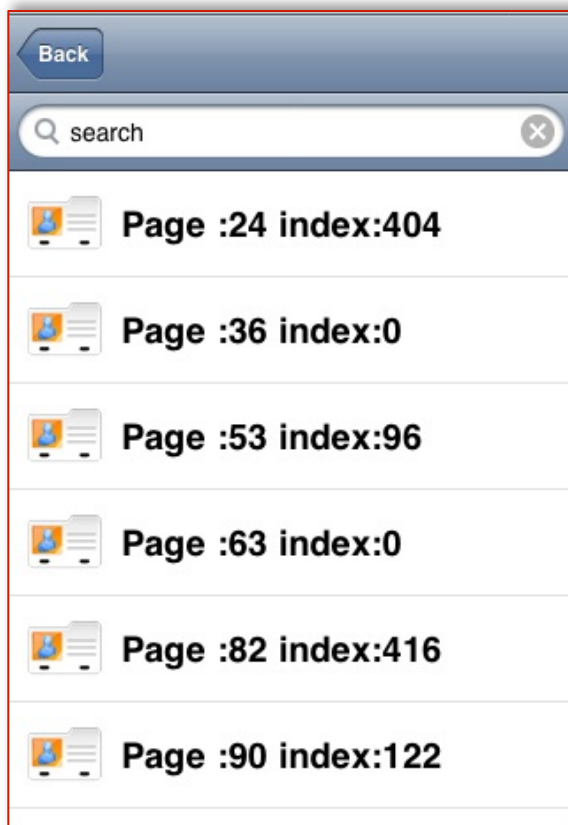

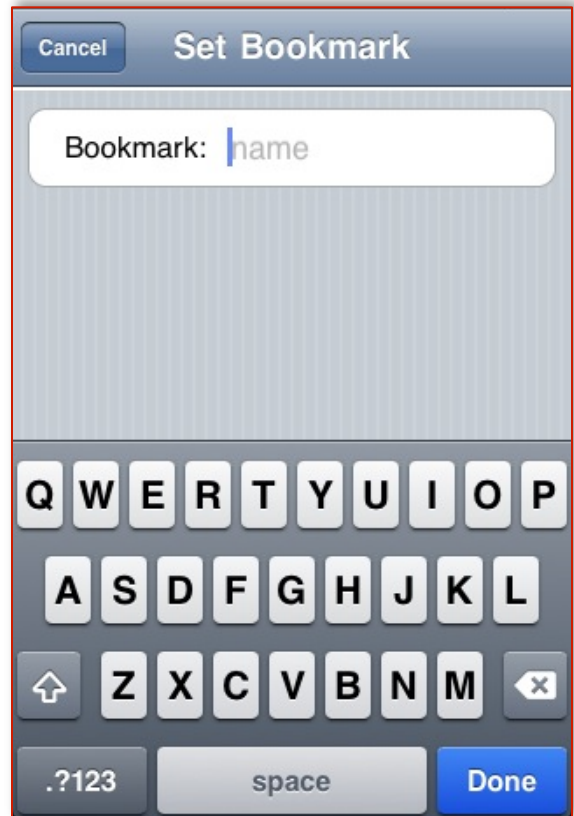

Let's review the buttons at the top of the screen and their functionality.

Press to go back to the main PDFReader screen.

### **Add a Bookmark**

While viewing the PDF, press the **Bookmark** button to set a bookmark for future reference. You can access the bookmark later by going to the Bookmarks menu.

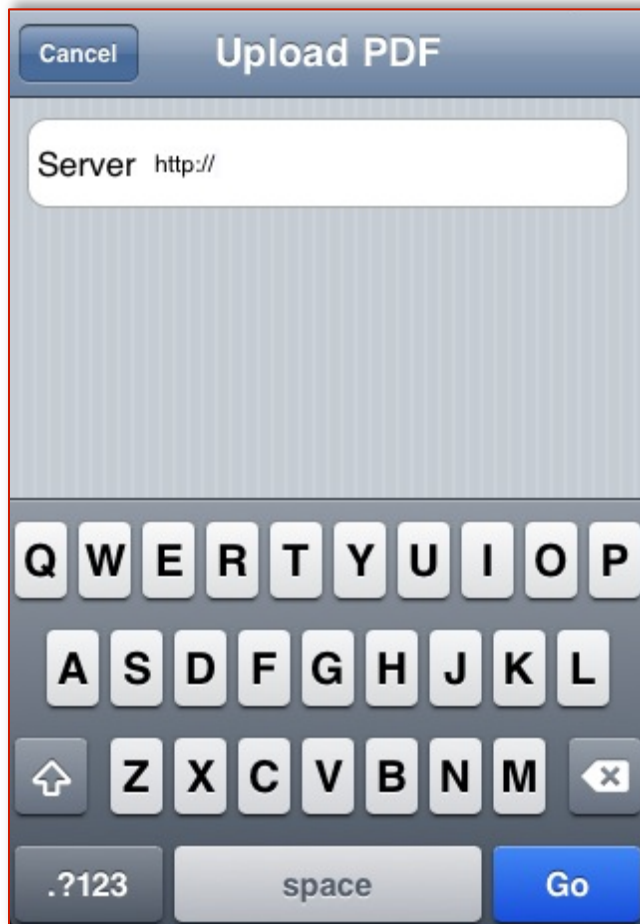

### **Search**

Enter a search word or words in the search field and press **Search**. All pages that contain that word or words will display in the list. Select the page to view.

### **Upload**

Use the **Upload** button to upload the PDF file to a server. Enter the web address of the server and click **Go**. Please note that you must have access to server in order to upload to it.

### **Email**

The PDF can be emailed to a recipient using the built-in email functionality. Press the **Email** button and then specify the email address of the recipient.

Note: If the file is too big, you will receive a notification that the file is too big to email.

## Page Navigation

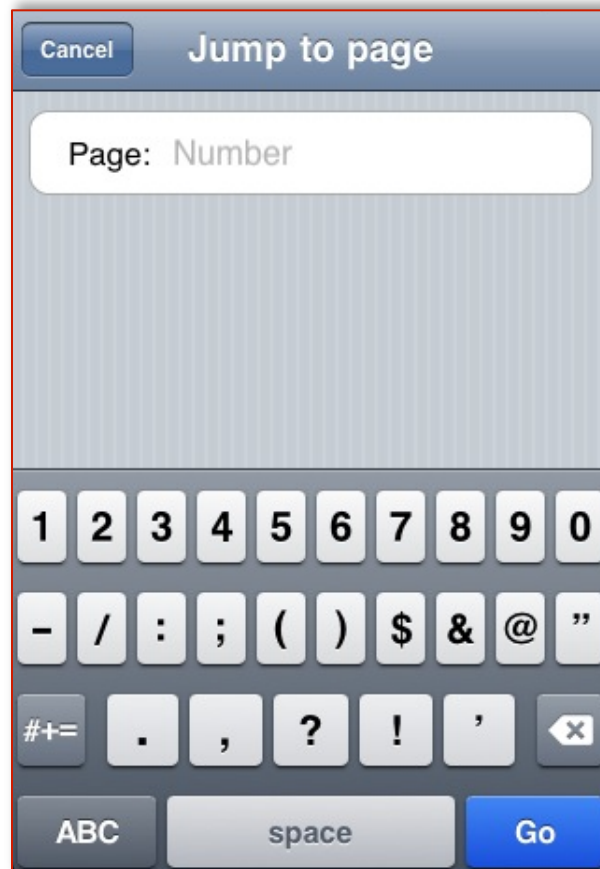

Press the left and right buttons to navigate through the PDF pages. You can also scroll through the document by moving the page up and down directly with your fingers.

The page number and the total number of pages display at the top left of the PDF window.

## Jump To

Enter a page number to go directly to that page and press **Go**.

## **Zoom**

To zoom on the page, use the standard functionality of double-tapping on a section of the screen or by extending your fingers outward to expand the screen size.

To zoom out, double-tap again on the screen or by pinching your fingers together on the screen.

## **Portrait and Landscape mode**

PDFs can be viewed in either portrait or landscape modes. Rotate the iPhone or iPod Touch to move from portrait to landscape orientation.

## **Transfer files from the computer to the iPhone/iPod Touch**

You need to use the wifi web sharing feature to transfer a file from your computer to your iPhone/iPod Touch.

### **Steps:**

1. Make sure that your iPhone/iPod Touch is connected to the same wifi network as your computer.
2. Once both your iPhone/iPod Touch and your computer are connected to the same network, open the application on your iPhone/iPod Touch, and at the bottom of the screen you will see an IP (example: <http://192.168.2.3:5500>) that you need to copy on your computer's address web browser (Safari, Firefox or Internet Explorer). Make sure that you copy the IP address exactly as it appears on your iPhone/iPod Touch.

**Note:** Don't use "www", just http:// and the number. Make sure that before the last number you are using a colon (:) and not a dot (.).

- Any files that you have saved through PDFReader will display. To upload a file, click the **Choose File** button. Browse to find the PDF file on your computer, select it, and then click on the **Upload** button. The transfer process will begin.

**Note:** If you are transferring a big file, it may take a few minutes for the process to finish. Make sure that during this process the application is running on your iPhone/iPod Touch and that you don't disconnect from wifi until the transfer is completed.

- Once the file is finished, it will appear in the PDFReader main screen.

To open the files on your computer, click the link(s) as listed on the page. The application must be running and connected via wifi during this process.
